1. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

2. The lengthy specification has not been checked to the extent necessary to determine the presence of all possible minor errors. Applicant's cooperation is requested in correcting any errors of which applicant may become aware in the specification.

3. Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-16, drawn to an ultrasound phantom, classified in class 73, subclass 1.86.
- II. Claims 17-18, drawn to an ultrasound phantom, classified in class 73, subclass 1.86.
- III. Claims 19-20, drawn to a manufacturing method for an ultrasound phantom, classified in class 29, subclass 530.

4. The inventions are distinct, each from the other because:

Inventions Group 3 and Groups 1-2 considered together are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case the product as claimed in Groups 1 and 2 can be made by another and materially different process than that of Group 3 such as one where the jelly like member is placed in the storage portions first and then the internal organ models are inserted therein with excess jelly like member forced out.

5. Inventions Group 1 and Group 2 are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because it does not require the use of a tube path into which an ultrasonic transducer can be inserted as evidenced by such only being claimed in dependent claims 2-3 of Group 1 and not in base claim 1 of Group 1. The subcombination has separate utility such as use as an ultrasound phantom with only one storage portion instead of two as in Group 1.

6. Because these inventions are distinct for the reasons given above and the search required for Group 1 is not required for Groups 2-3, etc., restriction for examination purposes as indicated is proper.

7. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
